### LAMPIRAN

### Lembar Hasil Wawancara

Nama : Capt. Luther AGT Kansil

Jabatan : Nakhoda

Tempat : MV Pekan Fajar

1. Apa yang menyebabkan kapal mengalami kandas di alur sungai?

Jawaban:

Banyak faktor yang mendorong kandasnya sebuah kapal di alur sungai. Mulai dari faktor alam yang kadang tidak bisa diprediksi, kondisi kapal yang kurang memadai, maupun faktor dari kesalahan manusianya sendiri. Pastinya ketika berlayar di alur sungai semua kesiapan harus dipersiapkan sebaik mungkin. Dalam hal ini menurut saya kesalahan manusia yang berperan dan dominan cukup besar dalam kejadian kandas ini.

2. Bagaimana cara membebaskan kapal dari keadaan kandas ketika berada pada alur sungai?

Jawaban:

Langkah pertama adalah segera menghentikan mesin untuk mencegah kerusakan lebih lanjut pada lambung kapal. Selanjutnya, lakukan penilaian cepat terhadap kondisi kapal termasuk lokasi kandas, kedalaman air di sekitar kapal, dan kemungkinan penyebabnya seperti arus atau sedimentasi. Setelah itu, komunikasi dengan otoritas pelabuhan atau pihak terkait sangat penting untuk mendapatkan panduan dan bantuan. Sepanjang proses yang dilakukan, penting untuk terus memantau cuaca arus, dan kondisi struktur kapal guna memastikan keselamatan awak dan mencegah kerusakan lingkungan lebih lanjut.

54

3. Apa langkah pencegahan yang wajib dilakukan awak atau kru kapal sebelum memasuki alur sungai agar kapal terhindar dari kandas?

Jawaban:

Perencanaan pelayaran adalah langkah awal yang sangat penting untuk memastikan kapal tidak melalui jalur yang berisiko. Nakhoda dan perwira navigasi harus menggunakan peta laut yang terbaru untuk mengidentifikasi rute dengan kedalaman aman, menghindari area dengan potensi bahaya seperti pasir, karang, atau kerangka kapal. Dengan perencanaan yang baik potensi kapal kandas dapat diminimalkan secara signifikan.

4. Bagaimana cara memastikan bahwa awak atau kru kapal siap untuk menghadapi kondisi alur yang berisiko?

Jawaban:

Sebagai Nakhoda, memastikan kru siap dalam menghadapi kondisi alur yang berisiko adalah prioritas utama saya. Hal ini saya lakukan melalui pelatihan rutin dan simulasi skenario darurat seperti evakuasi, kebakaran, dan navigasi di perairan padat atau berbahaya. Sebelum memasuki alur yang berisiko, saya selalu mengadakan *safety briefing* untuk memastikan semua kru memahami rencana perjalanan, kondisi cuaca, potensi bahaya, dan tanggung jawab masing-masing. Saya juga memantau kesehatan dan kesiapan fisik kru, melakukan rotasi jika diperlukan, dan memastikan penerapan Prosedur Operasional Standar (SOP) berjalan dengan baik. Penggunaan teknologi navigasi seperti ECDIS, AIS, dan GPS juga menjadi bagian penting untuk mendeteksi risiko lebih awal. Setelah operasi, evaluasi bersama dilakukan untuk terus meningkatkan kesiapan dan koordinasi kru. Dengan langkah-langkah ini, saya memastikan kru bekerja secara aman, efisien, dan terorganisir dalam menghadapi setiap tantangan operasional.

### Lembar Hasil Wawancara

Nama : Muhlis

Jabatan : Mualim I

Tempat : MV Pekan Fajar

1. Apa yang menyebabkan kapal mengalami kandas di alur sungai?

Jawaban:

Pada saat kejadian, saya sebagai Mualim I saat itu berada dan *standby* di haluan bersama bosun dan cadet. Menurut saya, faktor yang menyebabkan kapal mengalami kandas adalah kurangnya informasi terkini terkait keadaan alur sungai Berau. Disamping itu terdapat kondisi cuaca buruk seperti angin kencang dan badai sering menyebabkan kapal kehilangan kendali sehingga terjebak di perairan dangkal. Selain itu, kondisi muatan kita yang berlebihan atau distribusi yang tidak merata dapat menyebabkan kapal kehilangan keseimbangan sehingga mempengaruhi manuver kapal di perairan dangkal.

2. Bagaimana cara membebaskan kapal dari keadaan kandas ketika berada

pada alur sungai?

Jawaban:

Langkah awal dalam melakukan suatu penanganan sangat perlu untuk kita melakukan identifikasi dahulu penyebab kandas. Hal ini dapat mencakup daripada kesalahan manusia dalam bernavigasi secara aman atau kesalahan pada saat pelaksanaan prosedur. Upaya pembebasan bisa dilakukan dengan mengurangi beban kapal seperti memindahkan kargo atau membuang ballast untuk meningkatkan daya apung. Bila memungkinkan, gunakan kapal tunda untuk menarik kapal ke perairan yang lebih dalam.

56

3. Apa langkah pencegahan yang wajib dilakukan awak atau kru kapal sebelum memasuki alur sungai agar kapal terhindar dari kandas?

Jawaban:

Yang saya ketahui sebagai Mualim I diatas kapal langkah awal yang saya ambil untuk persiapan memasuki alur pelayaran sempit agar terhindar dari kandas adalah menghubungi otoritas pelabuhan atau pengelola sungai. Hal ini bertujuan untuk mendapatkan informasi terbaru mengenai kondisi keadaan alur sungai tersebut seperti maksimum dan minimum draft kapal, ketentuan kecepatan kapal, menginformasikan rencana perjalanan, memonitor saluran radio untuk mendapatkan informasi terkini tentang kondisi alur. Selanjutnya pengecekan kondisi kapal seperti kedalaman draft kapal sesuaikan dengan keadaan di alur sungai tersebut. Setelah itu, pengecekan kondisi mesin, kemudi, dan propulsi kapal dalam kondisi yang baik untuk manuver di alur pelayaran sempit.

4. Bagaimana cara memastikan bahwa awak atau kru kapal siap untuk menghadapi kondisi alur yang berisiko?

Jawaban:

Untuk memastikan kru kapal siap menghadapi kondisi alur yang berisiko adalah dengan memberikan pelatihan rutin termasuk latihan keselamatan dan manuver darurat. Semua awak harus memahami prosedur navigasi di area berisiko seperti sungai sempit, arus kuat, atau tikungan tajam, serta mengenali potensi bahaya di sekitar alur tersebut. Sebelum memasuki alur yang berisiko, briefing dilakukan untuk memastikan setiap kru memahami peran dan tanggung jawabnya. Komunikasi yang efektif di antara tim sangat penting, sehingga koordinasi dapat dilakukan secara cepat dan tepat saat menhadapi situasi kritis. Dengan pendekatan ini, kru dapat bekerja secara efisien dan meminimalkan risiko selama pelayaran.

### Lembar Hasil Wawancara

Nama : Moch Arsyah Putra Bahari

Jabatan : Mualim II

Tempat : MV Pekan Fajar

1. Apa yang menyebabkan kapal mengalami kandas di alur sungai?

Jawaban:

Yang saya ketahui pada saat kejadian kandas tersebut bermula dengan adanya perbedaan pendapat antara Nakhoda dan pihak kepanduan. Sebagai kepanduan yang paham tentang keadaan alur sekitar telah memberikan saran dan informasi untuk melewati alur yang dianggapnya lebih aman. Namun dalam hal ini, tanggapan seorang pandu ditolak oleh seorang Nakhoda, karena dengan pengalaman beliau yang pernah melewati alur tersebut. Tetapi, pada akhirnya setelah perbedaan pendapat yang terjadi seorang pandu memberikan kuasa komandonya kepada Nakhoda yang memimpin pada saat itu. Setelah semuanya diambil alih oleh seorang Nakhoda, sempat terjadi kepanikan akibat haluan kapal yang sudah jauh melewati jalur aman perairan sekitar dan terjadilah kandas.

2. Bagaimana cara membebaskan kapal dari keadaan kandas ketika berada pada alur sungai?

Jawaban:

Pada saat kejadian kandas ini yang saya ketahui, hal pertama yang dilakukan yaitu dengan mengetahui kondisi kapal saat itu. Baik kondisi kapal, muatan, dan awak kapal. Setelah itu semua awak kapal bersiap dengan tugas dan tanggung jawab masing-masing untuk membebaskan kapal dari kandas. Selanjutnya mencoba mengolah gerak menggunakan mesin sendiri dengan memperhatikan pasang tertinggi pada saat itu. Perlu diperhatikan juga kondisi lalu lintas saat itu, karena memakan waktu yang cukup lama serta ruang yang cukup luas untuk mengolah gerak sebuah kapal.

3. Apa langkah pencegahan yang wajib dilakukan awak atau kru kapal sebelum memasuki alur sungai agar kapal terhindar dari kandas?

Jawaban:

Saya sebagai Mualim II diatas kapal, langkah awal yang saya ambil adalah mempersiapkan semua alat navigasi yang menunjang untuk memasuki alur pelayaran sempit seperti mempersiapkan peta laut terbaru yang mencantumkan kedalaman air, rambu navigasi, dan bahaya potensial di sepanjang alur, mempersiapkan *Echosounder*, ECDIS, GPS, dan VHF radio berfungsi dengan baik. Selanjutnya memastikan *draft* kapal lebih kecil dari kedalaman minimum sungai.

4. Bagaimana cara memastikan bahwa awak atau kru kapal siap untuk menghadapi kondisi alur yang berisiko?

Jawaban:

Sebagai Mualim II, saya memastikan kru siap dalam menghadapi alur yang berisiko adalah bagian penting dari tanggung jawab saya, terutama dalam aspek navigasi dan keselamatan. Saya selalu memastikan kru memahami rencana perjalanan secara detail dengan memberikan *briefing* tentang kondisi alur, titik bahaya, dan kepadatan lalu lintas. Saya memastikan semua alat navigasi berfungsi optimal serta mendukung pemantauan *real-time*. Selain itu, saya aktif dalam pelatihan dan *safety drills* untuk meningkatkan keterampilan kru, memastikan peralatan keselamatan siap digunakan, dan memantau kesehatan serta kewaspadaan kru melalui jadwal kerja yang seimbang. Dengan mematuhi SOP dan menjaga komunikasi yang efektif, saya memastikan koordinasi berjalan dengan baik.
